

Clearing Passwords Stored in a browser's Password Manager

Required:

- Access to intended target's file system
- Python

Part I: Download and Install Python if not already

1) Head to <https://www.python.org/downloads/> to download Python

Part II: Get the Password Decryption Scripts

Google Chrome password decrypter:

[Google Chrome](#)

Firefox password decrypter:

[Firefox](#)

1) Copy and paste the python script into notepad and save it as a .py file

Part III: Running the script

1) Open PowerShell and change into the directory you saved the script into

2) Enter the command

> python <name_of_file>.py

*** If you get an error stating python is not recognized as the name of a cmdlet, run this command:

```
> [Environment]::SetEnvironmentVariable("Path", "$enc:Path;C:\Users\<user>\AppData\Local\Programs\Python\Python<x>")
```

- Make sure to enter in the right user and python version

ex)

```
> [Environment]::SetEnvironmentVariable("Path", "$enc:Path;C:\Users\Test\AppData\Local\Programs\Python\Python311")
```

Try this Metasploit module for more Fun
